

Anyone can setup this on their website

Make sure to read the entire page few times so that you understand this easy process
Zoom the Page to read all details

(1) Add the following 3 lines of code to your website to get the Accessibility Widget for your website

```
<meta charset="utf-8">
```

(THIS CODE GOES BEFORE </HEAD>)

```
<script src="https://s3.us-west-1.wasabisys.com/accessibilityvt/js/important.min.js"
integrity="sha256-o88AwQnZB+VDvE9tvIXrMQaPIFFSUTR+nldQm1LuPXQ="
crossorigin="anonymous"></script>
```

(THIS CODE GOES BEFORE </BODY> TAG)

```
<script id="visitortrust" src="https://s3.us-west-
1.wasabisys.com/accessibilityvt/js/validate.js?t=1670544949" data-key="visitortrust.com"
crossorigin="anonymous"></script>
```

(THIS CODE GOES BEFORE </BODY> TAG)

(2) IMPORTANT: More details

The first 2 are standard that come with most modern websites

```
<meta charset="utf-8">
```

(Most modern website already has this in their HEAD part)

```
<script src="https://s3.us-west-1.wasabisys.com/accessibilityvt/js/important.min.js"
integrity="sha256-o88AwQnZB+VDvE9tvIXrMQaPIFFSUTR+nldQm1LuPXQ="
crossorigin="anonymous"></script>
```

(Most modern website already JQuery in them)

(3) What you must do

Try to add all the 3 lines of code and if the site doesn't show accessibility widget start to remove the first 2 one by one.

(4) The third line of code is the actual code of our software

```
<script id="visitortrust" src="https://s3.us-west-1.wasabisys.com/accessibilityvt/js/validate.js?t=1670544949" data-key="visitortrust.com" crossorigin="anonymous"></script>
```

(5) Conclusion

In other words - if you have no idea about coding even then you can install it

Add all three lines of code first line before the `</head>` and other 2 before the `</body>` tag on your page

If the accessibility widget doesn't show

Remove the first line and then try

Even then the accessibility widget doesn't show

Remove the second line and try
